Economic and Market Commentary: Yellen's lecture in the mountains

September 1, 2017

Janet Yellen picked a poor time for a history lesson, and for slapping herself and the Federal Reserve on the back.

As uncertainty and rhetoric about the federal budget and the debt ceiling were building, the Fed Chair used her elevated platform at late August's Jackson Hole, Wyo., global central-bank symposium to look to the past. She tried to make the case that the Fed's actions during and after the financial crisis, especially its new regulations, strengthened the banking system without clipping the economy's wings. She warned about the potential dangers of undoing these rules. That seemed directed to President Trump, who is no fan of regulation. In fact, many assumed this speech surely means Trump will not nominate her for a second term.

We know Yellen always will be an academic at heart—this is not the first time she has taken that role in her tenure—and we realize she deeply believes the Fed's post-crisis policy and intervention made a difference. In particular, she asserts that the largest banks are now much more creditworthy, resilient and liquid. But she should have offered information about late September's Federal Open Market Committee (FOMC) meeting, even if she only more-or-less confirmed the Fed will begin to unwind its massive balance sheet then.

**Definition of Weighted Average Maturity and Weighted Average Life

WAM is the mean average of the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid, (b) would be repaid upon a demand by TexPool, or (c) are scheduled to have their interest rate readjusted to reflect current market rates. Securities with adjustable rates payable upon demand are treated as maturing on the earlier of the two dates set forth in (b) and (c) if their scheduled maturity is 397 days or less; and the later of the two dates set forth in (b) and (c) if their scheduled maturity is more than 397 days. The mean is weighted based on the percentage of the amortized cost of the portfolio invested in each period.

WAL is calculated in the same manner as WAM, but is based solely on the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid or (b) would be repaid upon a demand by TexPool, without reference to when interest rates of securities within TexPool are scheduled to be readjusted.

So we must go back to July's meeting minutes and to recent speeches by other Fed officials to glean what might happen. They seemed to point to the FOMC addressing the balance sheet in September and tightening in December. But the markets are not believing the latter right now, pricing in far less than 50% of a hike happening by year-end. In fact, it is not until June of 2018 that there is full expectation of another move. There are no market-based odds on the balance-sheet reduction, but we think it will happen. It will be the Fed's way of saying it is still committed to policy normalization.

The short end of the Treasury curve decreased slightly over August, with 1-month and 3-month Treasury yields falling from 0.98% to 0.96% and 1.07% to 1.02%, respectively. The London interbank offered rate (Libor) was stable, reflecting that the next Fed move likely won't happen this year. It rose only marginally over last month, with 1-month Libor remaining at 1.23%, 3-month increasing from 1.31% to 1.32% and 6-month decreasing from 1.46% to 1.45%.

The weighted average maturity for TexPool was 30 days and 47 days for TexPool Prime. We continue to buy floaters as we see them in attractive form. But even in this time of Libor stasis, it is important to remember that we are still in a rising-rate environment and, industry-wide, Local Government Investment Pools such as TexPool and TexPool Prime remain more responsive than bank deposit vehicles because pools trace increasing rates better and quicker on a historical basis. More than ever, the rallying call for cash managers is that the time is ripe for joining pools or increasing assets in them.

90-Day Treasury Bill is a short-term debt instrument backed by the national government. These are used to collect immediate cash to meet outstanding obligations.

Any private investor can invest in a Treasury bill. The 90-Day Treasury Bill is a weighted average rate of the weekly auctions of 90-Day Treasury Bills.

Past performance is no guarantee of future results.
